

FEMA Disaster Search Plugin

automates disaster tracking by pulling FEMA declarations directly into your loan files, saving you time, reducing manual

errors, and improving workflow efficiency. This tool also generates a PDF summary of any identified FEMA Disaster Declarations and automatically adds it to the eFolder.

KEY FEATURES:

Time Savings

Say goodbye to manual FEMA lookups. The plugin eliminates the need to visit the FEMA website or manually track updates.

Automatic Updates

Admins can trigger the tool to run automatically whenever there is a field change, milestone completion, etc. This ensures that loans in declared disaster areas are flagged.

Customizable Triggers

Business rules can be set to determine when and how often the FEMA Tool should run, and when it should stop running. This gives you full control over its behavior.

API VERSION NOW AVAILABLE!

FEMA Lookup tool has been completely re-written using the API. The tool can be run along-side the previous SDK version for evaluation and testing.

Try it today — completely free.
